DRAWING

¹ The output power of SLM lasers shall not be tuned and SLM performance is not guaranteed at power ratings other than factory preset. However, the power setting capability is not disabled. External attenuators are recommended instead.

Note: Product specifications are subject to change without prior notice to improve reliability, function or design or otherwise.

²The long term power test is carried out at constant laser body temperature (+/-0.1 °C) using an optical power meter with an input bandwidth of 10 Hz. The actual measurement rate has a period of about 20 seconds to 1 minute.

 $^{^4}$ Noise level is measured with a fast photodiode connected to an oscilloscope. The overall system bandwidth is from 2 kHz to 20 MHz.

 $^{^5\,\}mbox{Break-out-boxes}$ AM-C8 and AM-C3 can be used for conversion of UART communication to either USB or RS232.

 $^{^{\}rm 6}\,\rm SLM$ lasers shall not be modulated - use external modulators instead.

 $^{^{7}\,\}mbox{Excluding control}$ interface pins and an output window/fiber assembly.

 $^{^{\}rm 8}\,\rm Whichever$ occurs first. The laser has an integrated operational hours counter.
