PART NUMBER 1319L-14B

ITEM NAME 1319 NM LASER (DPSS; MM FIBER)

## PRODUCT DATASHEET

### DESCRIPTION

Compact 1319 nm laser is a DPSS module used in numerous applications, such as inspection, optical guiding, infrared absorption. The small size and all-in-one concept of the MatchBox series make the laser ready for integration into portable handheld devices.

By default, this type of laser is built with FC/PC connector, but other fiber terminations are available upon request. Details about non-standard connector and the fiber used with it should be discussed with the Integrated Optics sales team.

# <sup>1</sup> The optical power can be tuned from virtually 0% to 100%. However, other specifications, such as central wavelength, power stability, noise, polarization ratio, beam shape, quality and circularity are not guaranteed at power levels other than factory preset power. Significantly worse power stability is to be expected at very low power levels, e.g. <3% from specified nominal power.

Note: Product specifications are subject to change without prior notice to improve reliability, function or design or otherwise.

#### **DRAWING**

<sup>&</sup>lt;sup>2</sup>The long term power test is carried out at constant laser body temperature (+/-0.1 °C) using an optical power meter with an input bandwidth of 10 Hz. The actual measurement rate has a period of about 20 seconds to 1 minute.

<sup>&</sup>lt;sup>3</sup> The long term power test is carried out at constant laser body temperature (+/-0.1 °C) using an optical power meter with an input bandwidth of 10 Hz. The actual measurement rate has a period of about 20 seconds to 1 minute.

<sup>&</sup>lt;sup>4</sup> Noise level is measured with a fast photodiode connected to an oscilloscope. The overall system bandwidth is from 2 kHz to 20 MHz.

 $<sup>^{5}</sup>$  Break-out-boxes AM-C8 and AM-C3 can be used for conversion of UART communication to either USB or RS232.

<sup>&</sup>lt;sup>6</sup> Modulation of DPSS lasers is limited to a few kHz by physics. Therefore we recommend to modulate the laser by sending commands through UART interface. The TTL pin of DPSS lasers is configured to provide PWM signal for control of fan speed instead of modulation.

<sup>&</sup>lt;sup>7</sup>Excluding control interface pins and an output window/fiber assembly.

 $<sup>{\</sup>rm ^8\,Whichever}$  occurs first. The laser has an integrated operational hours counter.
